# Status of Red Swamp Crayfish Procambarus clarkii

To Conserve and improve Fish and Wildlife resources and their Habitats for sustainable use and appreciation by all

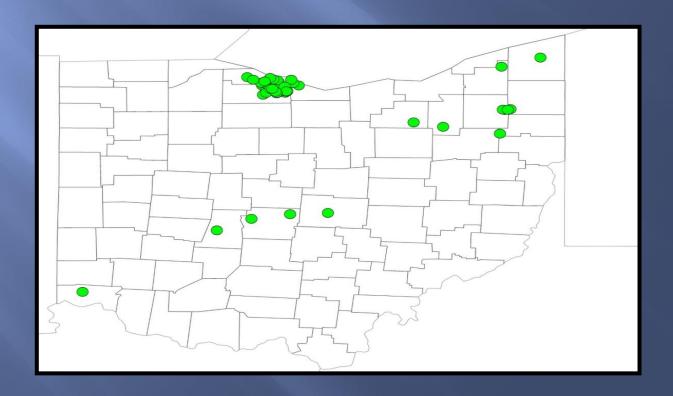

John Navarro Aquatic Invasive Species Program Administrator

### **Current Status**

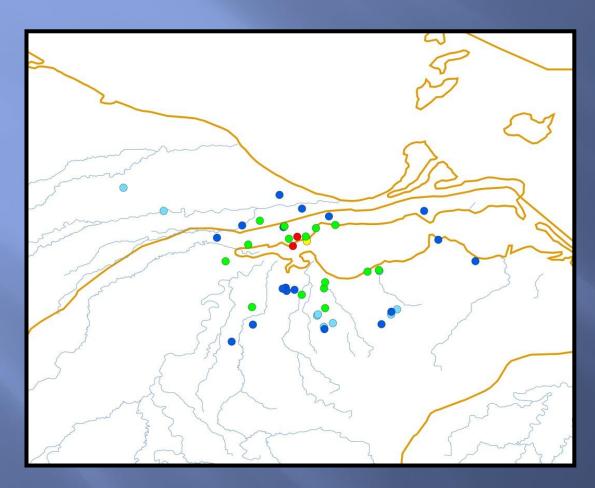

- Main invasion: Lake Erie Sandusky Bay
- Winous Point Shooting Club Epicenter
- Present for approximately 50 years
- Throughout SB and along coast (750 km2)

# High Risk Pathway?

#### **Ground Zero**

Red - 1960s Yellow -1970s Green - 1980s Light Blue - 1990s Dark Blue - 2000s

81 sites were sampled in 2017 - RSC at 14 sites

# What We Know

- Widespread, established, and abundant
- Prefer soils with high organic content
- Low gradient ditches are a dispersal route
- Six other burrowing crayfish encountered
- Out competing other burrowing crayfish

## What Can We Do?

- Too wide spread for effective action
- Trapping is not feasible
- Nuking will kill native crayfish
- Not likely to expand beyond organic soils
