

**Great Lakes Sediment and Nutrient Reduction Program
2023 REQUEST FOR PROPOSALS**

Deadline: April 21, 2023 - 5:00 p.m. Eastern

A webinar for applicants will be offered on March 14, 2023 at 10:00 a.m. Eastern to discuss funding priorities and the application process, receive tips for submitting competitive proposals, and ask questions of Great Lakes Commission staff. Information to join the webinar is below. For more information, please contact Connor Roessler, GLC Program Specialist at croessler@glc.org or 734-396-6084.

To register for the webinar, go to: <https://bit.ly/3EaAEt5>

GLC staff are working with colleagues at U.S. EPA to secure an additional webinar focused on use of EPA’s Pollutant Load Estimation Tool (PLET). All registrants for the March 14 webinar will be notified as additional details on the second, PLET-focused webinar become available.

VIII. CONTACT INFORMATION 12

I. PROGRAM BACKGROUND AND OBJECTIVES

Funding for the Great Lakes Sediment and Nutrient Reduction Program (GLSNRP) is provided by the U.S. Department of Agriculture – Natural Resources Conservation Service (NRCS) under the Great Lakes Restoration Initiative (GLRI). The GLRI is a U.S. Environmental Protection Agency (U.S. EPA)-led initiative designed to accelerate efforts to protect and restore the water resources of the Great Lakes basin. Funding for GLSNRP

supports work under GLRI Focus Area 3 aimed at controlling nonpoint source pollution and reducing nutrient runoff that contributes to harmful/nuisance algal blooms. The GLRI uses outcome-oriented performance goals and measures to target the most significant problems and track progress in addressing them. Under the GLRI, U.S. EPA and its federal partners coordinate state, tribal, local, and industry actions to protect, maintain, and restore the chemical, biological, and physical integrity of the Great Lakes.

The GLSNRP supports two Focus Area 3 objectives articulated in GLRI Action Plan III, dated October 2019:

- 3.1. Reduce nutrient loads from agricultural watersheds.
- 3.2. Reduce untreated stormwater runoff.

Project proposals supporting significant progress toward Focus Area 3 Measures of Progress relevant to the GLSNRP will all be considered for funding:

- 3.1.1. Estimated pounds of phosphorus reductions from conservation practice implementation throughout Great Lake Watersheds.
- 3.1.2. Acres receiving technical or financial assistance on nutrient management in priority watersheds¹.
- 3.2.2. Miles of Great Lakes shoreline and riparian corridors restored or protected.

The program is also interested in measuring the impact of proposed project activities on acres of riparian buffer restored or reconnected and gallons of stormwater runoff captured or treated.

In accordance with agreements between the Great Lakes Commission (GLC) and NRCS, phosphorus control projects remain a priority for funding in 2023.

II. GRANT ELIGIBILITY INFORMATION

All projects must clearly demonstrate how they will reduce total phosphorus contributions to the Great Lakes basin or otherwise reduce the effects of sediment and nutrients to improve local water quality consistent with any combination of the measures of progress set forth above. It is anticipated that roughly \$1,543,000 in funding will be available for project support contingent upon final authorization from the funder (NRCS). A twenty-five percent match will be required of each project.

GLSNRP funds cannot be used to support projects or costs required under local, state or federal regulation including permitting.

Applicants must be non-federal units of government or incorporated non-profit organizations. Eligible applicants include, but are not limited to conservation districts, county and municipal governments, regional planning commissions, federally recognized tribes, and state agencies. Examples of eligible nonprofit organizations include watershed organizations, stream and lake associations, environmental groups, and other conservation-focused groups.

To be considered for funding, applicants must:

- demonstrate sufficient experience in the successful administration of similarly sized projects, including sufficient staffing and
- be cognizant that, as a reimbursement-based grant program, GLSNRP grantees must assure that sufficient funds are available to pay for activities.

Only areas within the United States portion of the Great Lakes basin are eligible for funding. U.S. federal agencies, public and private Canadian organizations, for-profit companies and private landowners cannot apply directly, but

¹ Nutrient management: planning for and/or managing the amount, placement, and timing of plant nutrients to obtain optimum yields and minimize the risk of surface and groundwater pollution.

are encouraged to participate as project partners. First-time applicants to the program are encouraged to apply, in particular eligible entities focusing on underserved communities, including historically underserved producers².

Applicants selected to receive a grant award will be required to enter into a project contract with the GLC. A project contract consists of standard “boilerplate” language³ and the applicant’s approved project description, work plan, timeline, and budget information. To assure performance, contracts will include commitments to achieve estimated phosphorus reduction targets or other appropriate GLRI Focus Area 3 Measures of Progress based on the applicant’s approved work plan as well as committed matching funds. Failure of a successful applicant to accept contractual obligations as written by the GLC, including requirements pertaining to insurance, will likely result in cancellation of the grant award.

III. 2023 PROJECT SOLICITATION

A. Funding Priorities and Restrictions

In 2023, the GLSNRP is soliciting projects that facilitate the reduction of total phosphorus inputs to waters of the Great Lakes basin and achievement of other relevant Focus Area 3 Measures of Progress as articulated on page two. Reductions may be achieved through a mix of structural or engineered controls and, for agriculturally focused projects, annual practices with an emphasis on long-term sustainability and behavior change among agricultural producers (i.e. retained beyond the duration of the grant agreement). Annual practices should be renewed for at least 3 years. The program is particularly interested in creative approaches for engagement with the agricultural community and encourages applicants to review a GLC report on improving the effectiveness of GLRI investments in agricultural conservation, accessible at:

<https://www.glc.org/work/reap/products>.

Under this year’s program, GLSNRP will fund two types of projects aimed at reducing nonpoint source loading of nutrients and sediment to the Great Lakes: **Agricultural Projects**, and **Streambank/Shoreline Projects**. Applicants will be asked to identify the primary Project Type within the application and, where possible, should consider siting projects in a manner that historically underserved communities incur project benefits.

- An **Agricultural Project** focuses on reducing nutrient loads from agricultural lands through systems of conservation practices that avoid, control, or trap nutrients and sediment. This can be accomplished on farm fields (e.g., nutrient management) or at the edge of fields (e.g., saturated buffers, drainage water management). Projects should aim to reduce sediment and nutrient losses by minimizing nutrient inputs, preventing soil erosion, and improving infiltration to prevent agricultural stormwater runoff. Use of constructed or restored wetlands, and similar natural features within or adjacent to farm fields is encouraged. Maintenance of existing stormwater detention or retention features is not eligible for funding at this time.
- A **Streambank/Shoreline** project focuses on reducing nutrient and sediment loading from Great Lakes tributaries through implementation of climate resilient, natural techniques, such as floodplain reconnection, to prevent runoff and erosion. Projects should aim to maximize opportunities to infiltrate and detain stormwater runoff as part of a watershed-based approach. Use of constructed or restored wetlands, and similar natural features within riparian corridors or adjacent to beaches is encouraged. Projects can be located on any waterbody that drains to the Great Lakes including a beach, streambank, drainage ditch, etc. however, projects should also consider activities to mitigate upland sources of sediment or nutrients and consider hydrologic impacts upstream and downstream of the proposed work area. Projects intended to solely protect property without corresponding water quality benefits are not good candidates under this Request for Proposals.

Applications for each Project Type must:

- support relevant state-approved nonpoint source reduction plans (e.g., watershed plan), a nine key

2 NRCS provides [more detail on historically underserved producer definitions](#).

³ An Example Contract is available at <https://www.glc.org/wp-content/uploads/GLSNRP-2020-Grantee-Contract-RFP-Sample.pdf>. Please note that this is subject to change for the 2023 grant cycle.

elements plan, or another government-endorsed plan. Applicants will be given additional consideration for funding if sufficient context is provided on how proposed activities will help to achieve the objectives of the relevant plan and benefit the Great Lakes basin and

- reflect significant water quality benefits.

In 2023, the program continues to encourage applicants to consider the following attributes:

- Intentional, inclusive, and meaningful outreach activities
- Farmer-led networks and other credible partnerships
- Stream restoration and agricultural nonpoint projects that help protect sources of drinking water
- Climate resilient best management practices
- Regenerative agriculture, including rotational grazing
- Innovative practices for manure management
- Projects that “stack” multiple practices across one field or acreage.

Projects reflecting one or more of the attributes listed above will be eligible for additional points during scoring, provided that attributes are articulated well and are a natural fit within the entirety of the proposed project.

Restrictions

Under the program, water quality monitoring, research, and data analysis activities cannot be funded. However, soil testing and limited grab samples of surface water for outreach purposes are allowable expenses with adequate justification.

Purchases of equipment such as vehicles and/or field implements cannot be funded.⁴ Grant dollars also cannot be used to fund technical assistance (i.e., personnel) to implement Farm Bill cost-share programs.

B. Project Funding, Size, and Timeframe

Funding

Applicants are encouraged to focus their efforts on submitting a single “shovel ready” project application to be more competitive within the pool of applicants. Funding will only be awarded for one application per organization. Projects that are intended to be a continuation of a previously funded GLSNRP project should be appropriately identified within the project application. **The maximum funding request per project will be capped at \$300,000. Projects demonstrating the strongest return on investment of program dollars in terms of long-term reductions of nutrients and sediment will be a priority for funding. Smaller projects that may be completed in less than two construction seasons are also competitive within this program.**

Funds may be used for both technical assistance and financial assistance. However, as described above, grant dollars cannot be used to fund technical assistance (i.e., personnel or consultants) with the sole purpose of implementing Farm Bill cost-share programs. Cost-share for producers should align with NRCS pricing for practices in the relevant state, unless the project proposes an alternative pricing structure such as “pay for performance.” The mix of technical and financial assistance will depend on the local situation. Applications may propose to use up to 20% of an award for technical assistance funding; however, adequate justification must be provided.

Size

It is suggested that areas where project activities would occur be limited to no more than four (4) USGS twelve-digit Hydrologic Unit Codes (HUCs) within an eight-digit HUC, but applicants can vary outside this range with justification.

⁴ Leasing of equipment using grant funds or as a match expense is allowable under this program. Lease to own arrangements for equipment should be disclosed within the grant application and will be considered on a case-by-case basis. Retrofitting of existing equipment is also allowed with adequate justification and documentation of the disposition of purchased components.

Timeframe

Selected projects should begin no later than October 1, 2023, with potential for earlier start dates, if circumstances warrant. **All work must be completed within a four-year period, inclusive of the time required to obtain all permits and approvals.** Applicants should account for possible permitting delays when planning the project timeframe. If a project can be completed in less than four years or would benefit from a start date between August 15 and October 1, 2023, please specify this within your proposal.

C. Eligible Project Areas

Projects must be located within the United States portion of the Great Lakes basin. Projects seeking to improve conditions within an inland lake of the Great Lakes basin must demonstrate benefits to local communities in the basin, beyond lakefront property owners, to be considered. Projects with a discernable benefit to a Great Lake are likely to be preferred during scoring of proposals.

D. Specific Project Requirements and Evaluation Criteria

Each proposal must utilize the provided application form. Do not vary from the instructions. Proposals that vary from the stated instructions will not be considered. A properly completed application will establish the following:

Project Description and Impact:

- Show a direct and discernible reduction of nutrient and sediment losses, with emphasis on total phosphorus and/or other Focus Area 3 Measures of Progress, into waters of the Great Lakes basin and in support of a relevant state-approved nonpoint source reduction plan(s).
- Commit to achieving estimated reductions in total phosphorus or other Focus Area 3 Measures of Progress during the proposed four-year (or less) duration of activities. Address phosphorus and/or sediment problems from agricultural, urban, forest, range, and/or pastureland or other crucial land uses, with preference given to projects in areas with an identified need for phosphorus and/or sediment reductions.

Implementation Strategy:

- Articulate any planning conducted to date or other preparatory activities that set the proposal on a course for success. Projects will be scored more favorably during the review process if the applicant can demonstrate specific planning that has occurred (e.g., coordination with landowners, completion of engineering plans, permitting) prior to the submittal of the application. If activities have not yet occurred but will be completed prior to the start of the project period, please describe that as well.
- Identify conservation practice types and amounts, the schedule of activities for implementation, and financial incentive methodologies.
- Identify anticipated annual and cumulative results supporting applicable GLRI Focus Area 3 Measures of Progress.

Communications Efforts:

- Describe a strategy to keep the public, land users, elected officials, and government officials informed of project activities.
- Outline a plan to share project results and outcomes with the project funder and with the public through outreach and technology transfer, including potential attendance at one or more knowledge transfer conference convened by the GLC during the grant performance period.

Schedule of Activities:

- Clearly identify all activities necessary to assure achievement of project outcomes, with planned delivery dates.
- It is understood that activities and dates may require adaptation over time; however, this section should demonstrate to the GLSNRP Task Force that a thoughtful, realistic plan is in place for success.

Budget Narrative:

- Describe activities under each relevant budget category to support amounts requested in the separate Budget Table.
- For projects relying on significant contractor support for construction activities, provide details on anticipated activities, allocation of grant dollars, and plans for effective oversight and cost control.
- Applicants should demonstrate value toward a strong return on investment of grant dollars.

Administrative Capacity:

- Provide adequate assurance of the applicant’s ability to meet all terms of this Request for Proposals, including, but not limited to reporting, record-keeping, and match commitments, as those requirements will become contractual obligations if an organization is selected for funding.
- Confirm the applicant’s understanding that the GLSNRP is a reimbursement-based program and that sufficient funds are available to make payments for project activities *prior to* seeking reimbursement from the GLC.
- Details on previous performance of similar work or implementation of similarly sized awards is helpful, as is a demonstration of an independent financial audit or other controls to assure proper management of funds.

E. Calculation of Load Reductions

Applicants will be required to estimate reductions their project will achieve and briefly describe the methodology used to arrive at the estimates.

Phosphorus and soil erosion reduction goals should be estimated using the U.S. EPA Region 5 Spreadsheet or Pollutant Load Estimation Tool (PLET), as appropriate for the proposed project.

Used to estimate particulate phosphorus reductions, both the Region 5 model and PLET are available online at: <https://www.epa.gov/nps/spreadsheet-tool-estimating-pollutant-loads-stepl-and-region-5-model> and <https://www.epa.gov/nps/plet>, respectively.

Past successful applications have also relied upon [USDA’s Nutrient Tracking Tool](#) and other methodologies so long as justification is provided for use of the proposed alternative calculation tool.

F. Budget Information

All applicants must submit itemized project budgets for the proposed work along with appropriate justification for project expenses. Project budgets should not be increased arbitrarily to meet the suggested maximum amount and should be representative of the project’s proposed size and scope.

Refer to sections III. A and B, above, for additional funding restrictions under the program.

It is recommended that applicants include funding within their project budget to support travel to and participation at a 1- or 2-day conference for GLSNRP grant recipients in or near Ann Arbor, Michigan, during the late summer or early fall of 2024 or 2026. The GLC invites current and former grant recipients to share innovative work and lessons learned and convenes leading experts on sediment and nutrient control to present on the latest research supporting successful approaches in the Great Lakes basin. These new “GLSNRP Dialogues” are slated to occur every two years.

G. Indirect Costs

Indirect costs are those incurred by the applicant for a common or joint purpose benefiting more than one cost objective or project, and otherwise not readily assignable to specific cost objectives or projects as a direct cost. Common examples of indirect costs are the necessary facilities and administrative costs associated with the day-to-day business functions of an organization (e.g., rent, utilities, insurance, accounting services).

Applicants may include indirect costs within their GLSNRP project budgets but are not required to do so. As alternatives to charging all direct costs to grant funds, applicants may voluntarily: (1) forego part or all of their indirect costs as a grant expense, or (2) include part or all of their indirect costs as match for the project (allowable only if costs are not otherwise supported by a federal source). **Applicants must explicitly describe within the budget narrative section of their application whether their indirect costs will be attributed to the grant portion of the budget and/or the match portion of the budget, and fully describe the method and rate used to calculate the indirect costs.**

If the applicant has a current federally approved negotiated indirect cost rate (e.g., fixed, predetermined, final or provisional), this may be referred to as a Negotiated Indirect Cost Rate Agreement or NICRA. Applicants with a current NICRA who choose to include indirect costs as a grant or match expense must use their negotiated rate to calculate indirect costs for the project budget and will be required to submit a valid negotiated indirect cost agreement with their proposal. Applicants wishing to deviate from their approved NICRA to recover a lesser indirect rate must explicitly describe the voluntary deviation within their grant application materials.

For multi-year projects, grant recipients with an approved NICRA shall be approved to recover indirect costs at the approved rate in effect at the time the eligible costs are incurred by the recipient. If selected for funding, grant recipients will be required to submit to the GLC any subsequent approved NICRAs received during the project period.

Applicants who have never negotiated an indirect cost rate with the federal government or do not have a current approved NICRA may elect to charge indirect costs at a de minimis rate of 10 percent of Modified Total Direct Costs (MTDC), as defined by 2 CFR 200.414 (“Indirect (F&A) costs”), for the period of the grant agreement or until the applicant obtains an approved NICRA.

H. Match Requirement

Match is a financial commitment made by the grant recipient and/or its partner entities to help implement the project, and can be cash, in-kind, or a combination of both. Cash is any money received from any source, other than from federal sources, that is part of the applicant’s annual budget and audit process and will be utilized in the implementation of the project. In-kind includes services or financial contributions to the project not paid for with the grant or other federal funds.

The following list provides some examples of acceptable match, but is not intended to be exhaustive:

- Technical and/or administrative assistance provided by the applicant, other entities, or persons not paid for with the grant or with federal funds.
- All or a portion of the applicant’s indirect costs not otherwise paid for with the grant or with federal funds.
- Use of local and state agency vehicles other than those of the applicant.
- Cost-share agreements from landowners.
- Unpaid members of local task forces, watershed councils, work groups, citizen groups, etc. are considered volunteers, and may be calculated at the prevailing national minimum wage (currently \$7.25/hour) unless justification is provided for a higher rate. Additional skilled labor may be charged at a higher rate with additional, detailed justification.

Match may not include activities that would otherwise be deemed ineligible for direct funding support under GLSNRP (e.g., water quality monitoring, research, data analysis activities, equipment purchases other than retrofitting of existing equipment). Match cannot be accumulated prior to the official start date of the project contract (for example, October 1, 2023) or earned after completion of the project contract.

The total amount of match committed through the project application will become part of the applicant's contractual obligation if the project is selected for funding. Match projections should be realistic and achievable. Letters of commitment are required as a means of assuring adequate match. See Section V for details. **A match of 25% of the amount requested is required for all applications; however, match commitments beyond the 25% obligation will strengthen your application.**

IV. GRANT REQUIREMENTS

A. Applicant Capacity

Each successful applicant must have the ability to:

- Maintain sufficient funds to make required payments prior to seeking reimbursement from the grantor (GLC) for allowable project expenses.
- Hire or contract for technical assistance (e.g., personnel).
- Provide office space, administrative support, computer and other equipment, general office supplies, and other items to perform the proposed implementation effort.
- Enter into a legally binding contract with landowners for the life span of the practice.
- Provide a plan and assurances to maintain the implemented practices over their life span.
- Design and install all implementation practices according to USDA-NRCS standards and specifications and applicable state standards. Applicants are encouraged to use the services of a certified professional engineer or agronomist for this purpose as appropriate.
- Obtain all necessary federal, state, and local government permits and approvals where necessary for the proposed work prior to the expenditure of funds for those activities requiring permits.
- Achieve the total soil and phosphorus reduction savings as specified in the project proposal or otherwise achieved intended results toward identified Focus Area 3 Measures of Progress.
- Use the Region 5 model, PLET, or other appropriate modeling tools.
- Initiate/take advantage of outreach opportunities throughout the project period.
- Provide before, during, and after pictures of practice implementation, media events, and other activities of interest to the project.
- Abide by all local, state, and federal laws, rules, ordinances and regulations in the performance of this project and conduct all work in a lawful and safe manner, consistent with the standards and level of care normally provided for comparable work.
- Track conservation practice implementation progress using the procedures provided.
- Provide administrative capacity to timely submit quarterly and final reports of expenses and activities as well as provide other documentation as needed.
- **Provide the minimum levels of liability insurance coverage (see details below).**

B. Grant Reporting

Progress Reports

Progress reports must be submitted at least quarterly, even if no project activity has occurred during the reporting period. Reports will be due fourteen days after the end of each quarter of the federal fiscal year, which runs from October 1 through September 30.

Progress reports must include a signed (electronic or hard copy) invoice for reimbursement, a load reduction reporting form describing the conservation practice(s) installed during the quarter, and a narrative report of the

project's activity during the period. In addition, GLC staff may request receipts or other documentation for invoiced amounts.

Continued failures to timely submit reports or inadequate reporting are grounds for cancellation of an award. As such, applicants should carefully consider the above requirements and only apply if comfortable that satisfactory reporting will be achieved.

Final Report

A final project report will be required and a template will be provided for grantee use. Before, during, and after photos are required and may be shared by the GLC within its own reporting and other publications, with attribution. Please be thoughtful in selecting locations such that before and after photos are appropriately labeled and include clear landmarks showing easily comparable scale and perspective. The completed final report, as well as a final invoice for all remaining eligible project expenses and a final load reduction reporting form will be required within sixty (60) days of the completion of the project. Failure to submit an adequate final project report may result in the GLC withholding all remaining project funds until satisfactory completion of a report. As such, applicants should be mindful of this requirement and only apply if comfortable that satisfactory reporting will be achieved.

C. Administrative Requirements

Funds and Reimbursement

The GLSNRP is a reimbursement-based program meaning that grantees will be reimbursed for eligible project expenses that have been incurred and paid by the grantee, with sufficient documentation provided to the GLC upon request. Applicants must assure that adequate financial systems are in place to be able to submit accurate invoices and supporting documentation on a quarterly or monthly basis.

There will be one upfront payment (**10% of grant amount**) at the start of the project, which will occur after the GLC receives the signed contractual agreement from the grantee. Additional upfront funding up to 15% may be available with justification. This advance should be used by grantees to manage cash flows over the life of the project.

Except for the first payment, all subsequent payments to the grantee are made in arrears, based on signed invoices submitted at least quarterly to the GLC using the forms provided to successful applicants. Reimbursement may take up to 90 days to be processed once submitted, with potential for a longer period of time should a grantee submit inadequate invoices and related reports.

Financial Audit

Applicants that are regularly subject to an independent financial audit in accordance with generally accepted auditing standards should submit a copy of their most recent audited financial statements with their proposal. All applicants will be asked to briefly describe within their project application the administrative capacity and internal controls that exist to assure that grant funds will be managed properly. Organizations with proof of a recent successful audit will be specifically recognized in the evaluation of proposals.

Open Records

All successful applicants will be required to provide open access to all data, records, financial information, and other materials generated by or associated with the funded project (within the limits of state and federal regulations). It is essential that successful applicants maintain detailed records of all expenses and activities as well as copies of submitted reports for future audits. Project results must also be disseminated in a manner that ensures accessibility to others.

Insurance

Successful applicants must agree to obtain, provide, and maintain liability and other insurance coverages at not less than the levels indicated below (including coverage for their employees working on the project) for the duration of the project period and for three years thereafter. As part of the application, an authorized representative of the applicant organization is required to certify the organization's ability to meet the insurance requirements set forth below, without variance. The Insurance Certification form is where the applicant organization certifies their ability to meet the insurance requirements. The signed form is a required part of the application.

The grantee will be required to provide a certificate of insurance coverage (COI) to the GLC prior to execution of the grant contract and will need to ensure that an updated COI is on file at the GLC through the end of the grant period and for three years thereafter. Should an applicant renege on its assurance that insurance requirements will be met, without variance, during the contracting phase of the potential award of funds, then the GLC will not proceed with contracting and any offer of grant funding will be rescinded. The grantee must require that all contracted personnel or entities used by the grantee in performing the project work maintain the required insurances contained in this section for the duration of the grant period. **If necessary, insurance costs for the project may be included within the project budget.**

1. Commercial General Liability with the following minimum coverages:
 - \$2,000,000 General Aggregate
 - \$2,000,000 Products/Completed Operations Aggregate
 - \$1,000,000 Personal & Advertising Injury
 - \$1,000,000 Each Occurrence

Grantee must list the Great Lakes Commission as an ADDITIONAL INSURED or COVERED PARTY on the Commercial General Liability certificate, on a Primary and Noncontributory basis, with a Waiver of Subrogation.

2. If a motor vehicle is used to provide services or products under this Contract, the Grantee must have vehicle liability insurance on any auto including owned, hired and non-owned vehicles used in Grantee's business for bodily injury and property damage as required by law.
3. Workers' compensation coverage must be provided according to applicable laws governing the employees and employers work activities in the state in which the Project is located.
4. Employers liability insurance with the following minimum limits:
 - \$1,000,000 Each Accident
 - \$1,000,000 Disease (each employee)
 - \$1,000,000 Disease (aggregate limit)

GLC staff recommend that applicants make appropriate inquiries on whether Contractors Pollution Liability insurance should be secured or is otherwise available to cover claims from third parties against bodily injury and property damage caused by hazardous substances and materials released during work performed or from completed operations.

V. APPLICATION SUBMISSION INFORMATION

The following items must be submitted for all grant applications. Additional instructions, templates, and the web application form are available at: <https://www.glc.org/work/sediment/apply-2023>. Incomplete applications will not be considered for funding.

- Required: Completed Web Application Form
- Required: Completed Grant Application Template
- Required: Signed Insurance Certification
- Required: Completed GLSNRP Budget Form

- Required: A regional map depicting the general area of work within the Great Lakes basin
- Required: A local map depicting specific areas of work or potential work
- Required: Commitment letters articulating the terms of any applicable match toward the project, including any match to be provided by the applicant entity, should be provided to the extent available at the time of application. All match contributions committed to the project must be detailed prior to the award of funds.
- Optional: Up to three site photos that document or explain the problem addressed within the proposal
- Supporting Documents (as applicable):
 - Applicant's Negotiated Indirect Cost Rate Agreement (NICRA) – Required of applicants using a federal approved rate to calculate indirect costs within the project budget
 - Applicant's most recent financial audit – Required of applicant entities who conduct a regular independent financial audit

Any other information provided by the applicant – including reports and general letters of support – will not be considered, reviewed, or returned. Information provided in the grant application becomes public information and may be shared with others upon request.

If you are unable to submit the Grant Application materials via the online system or require additional submittal instructions or assistance, you must notify the Contact Person listed below to determine an acceptable alternative method for submitting your application materials prior to the application deadline.

VI. SUBMITTAL DEADLINE

Complete applications – including all required supporting documents – must be received by the GLC by **5:00 p.m. Eastern on April 21, 2023**. Late or incomplete applications will not be considered for funding.

A confirmation email will be sent to the email address provided within the Web Application Form verifying that the application has been submitted successfully.

VII. REVIEW AND SELECTION PROCESS

Proposals meeting all criteria identified above will be reviewed and evaluated by the GLSNRP Task Force coordinated by the GLC. The Task Force is comprised of representatives from each of the eight Great Lakes states as well as federal agencies. A list of Task Force members can be found at <https://www.glc.org/work/sediment/taskforce>. Applicants are encouraged to contact their state’s Task Force member to discuss this RFP and the details of proposed projects.

Applications will be scored in accordance with the following rubric:

Category	Scoring Range
Project Description & Impact	0-10 per category
Project cohesion with existing improvement plans	
Implementation Strategy	
Communication Efforts to Drive Change	
Schedule of Activities	
Budget Narrative	
Administrative Capacity	0-5
Additional Points	1 point available for each attribute if adequately described and appropriate to the totality of the proposed work
Intentional, inclusive, and meaningful outreach activities	
Farmer-led networks and other credible partnerships	
Stream restoration and agricultural nonpoint projects that help protect sources of drinking water	
Climate resilient best management practices	
Regenerative agriculture, including rotational grazing	
Innovative practices for manure management	
Projects that “stack” multiple practices across one field or acre.	
Total	72

Applicants may also be contacted for clarification of project or applicant details. The GLC (on behalf of the Task Force) reserves the right to offer grants for amounts other than those requested and may request changes to the proposed work plan prior to approving a project for funding.

Final grant decisions are anticipated in July 2023. All applicants will be notified of the status of their application on or around that time. Awardees are prohibited from making public announcements on the receipt of funding until after the GLC makes its own announcement of the awards.

VIII. CONTACT INFORMATION

Please direct any questions pertaining to the Great Lakes Sediment and Nutrient Reduction Program application process to:

Connor Roessler, Program Specialist
 Great Lakes Commission
 1300 Victors Way, Suite 1350
 Ann Arbor, MI 48108-5203
