Objective

Develop eco-epidemiological models to inform risk-based management activities that will prevent the spread of aquatic invasive species.

Data Sources

**Boater
movement**

Lakes in the known network based on 1,666,704 reported movements:

- = Inspected (737)
- = Connected (1,409)
- = Not included (7,036)

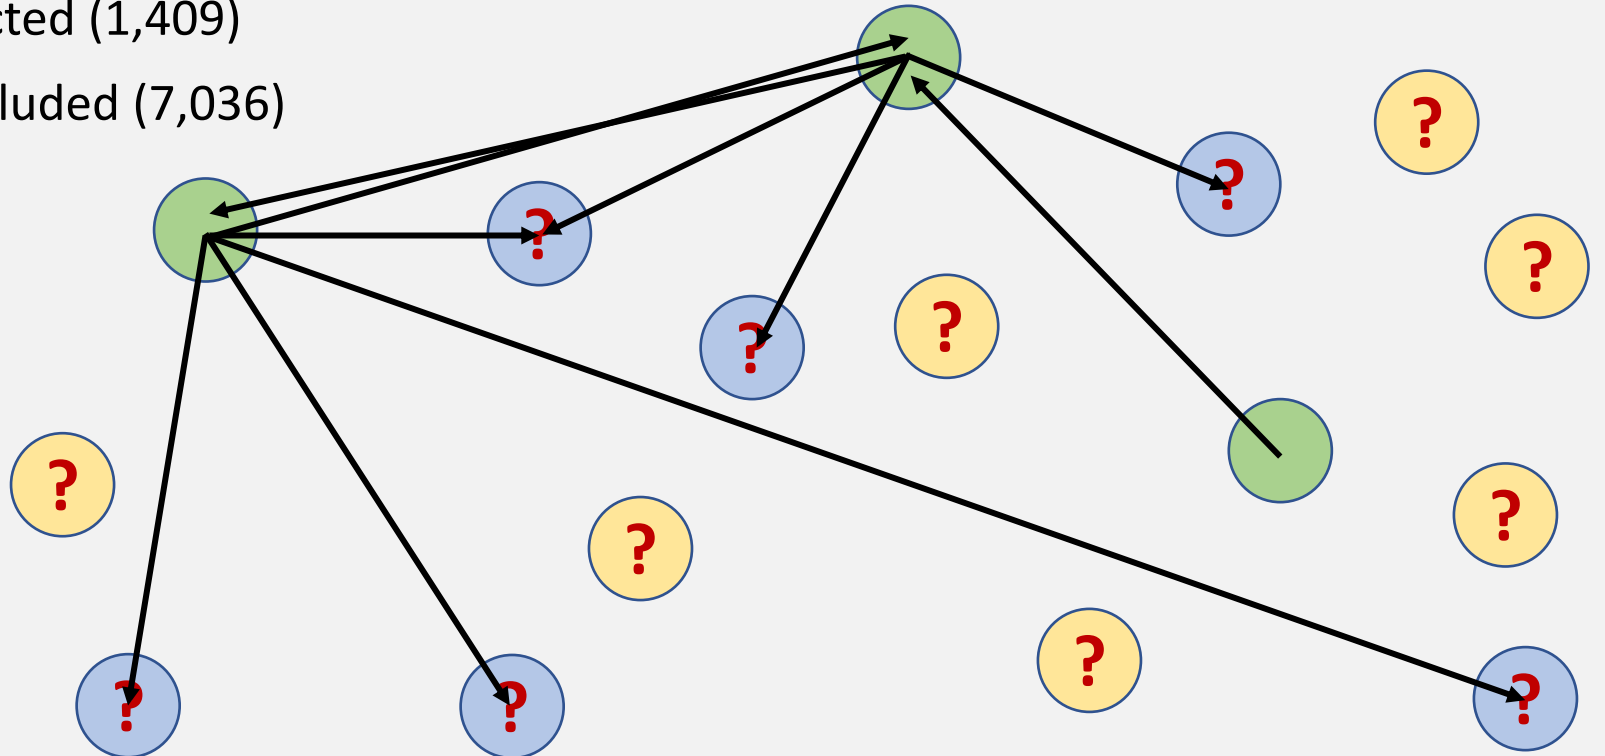

Data Sources

Boater
movement

Lakes in the known network based on 1,666,704 reported movements:

-  = Inspected (737)
-  = Connected (1,409)
-  = Not included (7,036)

ORIGINAL PAPER

Network connectivity of Minnesota waterbodies and implications for aquatic invasive species prevention

Szu-Yu Zoe Kao · Eva A. Enns · Megan Tomamichel · Adam Doll ·
Luis E. Escobar · Huijie Qiao · Meggan E. Craft · Nicholas B. D. Phelps 

Received: 18 November 2020 / Accepted: 1 May 2021

Data Sources

**Boater
movement**

Estimated boater network:

-  = "Inspected" (9,182)
-  = Not inspected (0)
-  = Not included (0)

(A) All lakes in Minnesota

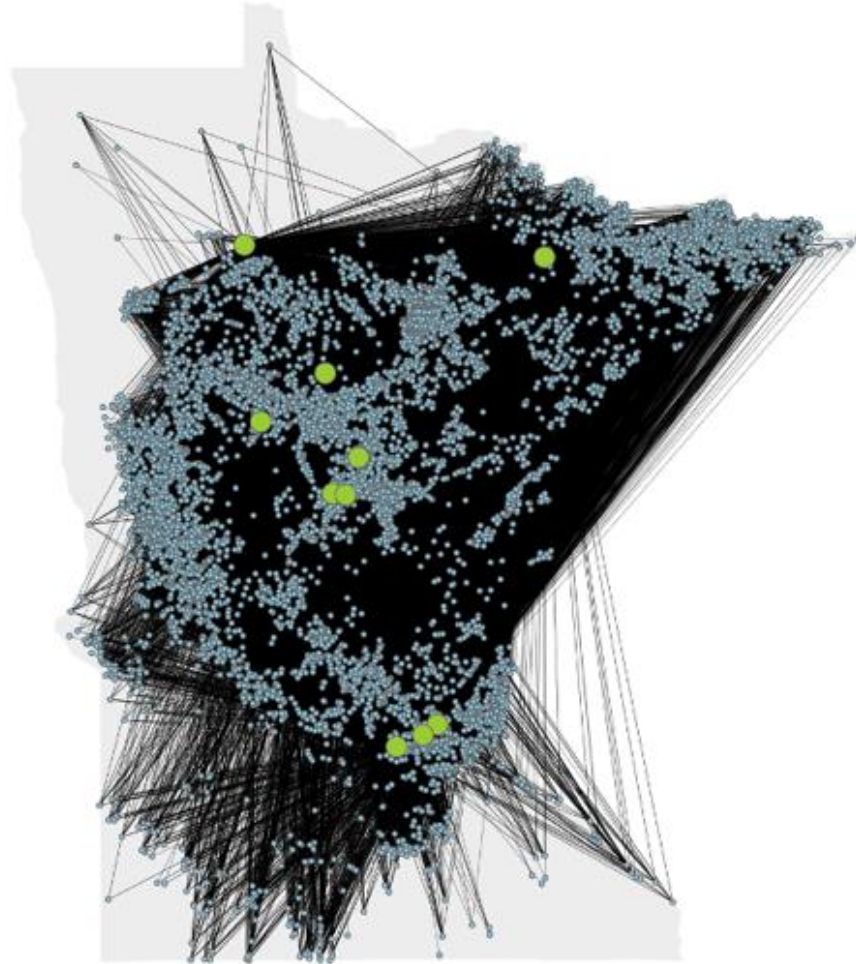

Data Sources

Boater
movement

(B) Top 10 most connected lakes

(C) Top 10 lakes with highest centrality

Data Sources

Water connectivity

Waterbody ID

Verification

Connectivity network

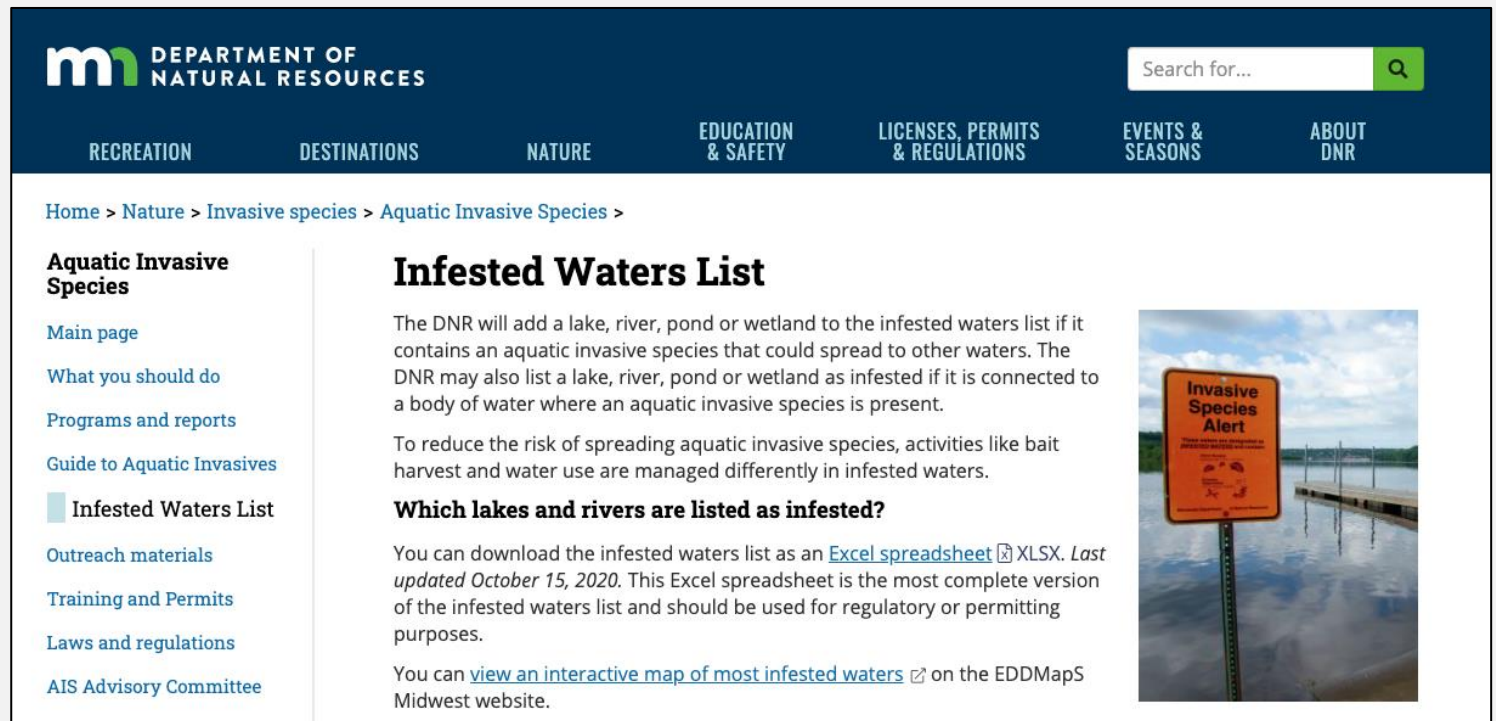

Data Sources

- Lakes confirmed to be infested by the MN DNR are incorporated into the model
- Models are updated weekly to account for new infestations

Infested waters list

The screenshot shows the Minnesota Department of Natural Resources website. The header includes the logo and navigation links: RECREATION, DESTINATIONS, NATURE, EDUCATION & SAFETY, LICENSES, PERMITS & REGULATIONS, EVENTS & SEASONS, and ABOUT DNR. A search bar is located in the top right. The main content area is titled 'Infested Waters List' and includes a breadcrumb trail: Home > Nature > Invasive species > Aquatic Invasive Species >. The page text explains that the DNR adds lakes, rivers, ponds, or wetlands to the infested waters list if they contain aquatic invasive species that could spread to other waters. It also provides information on how to reduce the risk of spreading these species and offers a link to download an Excel spreadsheet of the infested waters list, last updated on October 15, 2020. A photo of an 'Invasive Species Alert' sign is shown on the right side of the page.

Creating models to inform:

1. Introduction risk for surveillance
2. Prioritization for watercraft inspections

Map of Inspection Stations Chart

■ Lakes with proposed inspection stations

Co-creation

- Managers identified need
- Project meetings with managers throughout process
- Iterative feedback on tool development

Outreach

- Four webinars since November 2020
 - IMC, UMISC, MLRA, AIS Detectors
- Local management online workshops
 - 33 LGU participants
 - MN DNR AIS staff meetings
 - Many one-on-one interactions to assist with planning
- Other states and countries

Future Directions

- Add complexity with existing data
 - Create multi-state networks
 - Multi-county cooperation for watercraft inspections
 - Incorporate prevention activities to reduce risk
 - Incorporate environmental suitability
 - Consider risk-based allocation of local/state funds
- ...and much more!
